How can Trend Micro Vision One™ solve your detection and response challenges?

THE PROBLEM

Stealthy threats are evading detection

It only takes one threat to get through to be 100% at risk.

A recent report found that 85% of organizations say that threat detection and response is getting more difficult.

– ESG Research

Disconnected security layers make analyzing and investigating threats a challenge.

Siloed tools lead to missed detections and manually taxing investigations.

Organizations with a higher level of extended detection and response (XDR) alignment are 2x more likely to be very confident in their ability to keep up with the changing threat detection and response environment.

– ESG Research

Slow and inadequate response increases the impact of the attack.

With no clear indicators, it's hard to respond effectively. Organizations have limited time or skills to manage these threats.

68% of breaches took several months or longer to discover. The mean time to identify (MTTI) increased to 197 days and the mean time to contain (MTTC) increased to 69 days.

-Verizon

THE SOLUTION

Too many alerts? Not sure what's critical? Hard to investigate? Threats taking too long to detect?

Trend Micro Vision One can help see what you've been missing.

THE BEST OF XDR WITH TREND MICRO VISION ONE

Beyond the Single Layer

XDR connects events across email, endpoints, servers, cloud workloads, and networks that seem benign on their own—but represent a meaningful indicator of compromise.

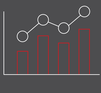
94% of malware infections come from email, which is the #1 cyberattack source.

-Verizon

Correlation and analytics across security layers mean fewer, higher confidence alerts and faster, earlier detection—with it, you can combat threat overload.

A high volume of false positive alerts – combined with manual operations – are two of the most cited contributors to uninvestigated alerts.

– IDC



Most organizations are spending hundreds of hours a week investigating suspicious alerts. Despite hundreds of hours devoted to alert investigation, 17% are not investigated at all.

– IDC

Integrated Investigation and Response

One view for investigation helps you "connect the dots." Achieve an attack-centric assessment of an entire chain of events across security layers with the ability to take response actions from a single place.

Organizations with XDR are 2.2x more likely to detect a data breach or successful attack in a few days or less.

– ESG Research

AUGMENT YOUR TEAM WITH

TREND MICRO™ MANAGED XDR SERVICE

Trend Micro™ Managed XDR offers 24/7 critical alert monitoring, investigation, and response backed by the resources and expertise of a team of Trend Micro threat experts.

We can help you alleviate the pain and time to identify and investigate threats.
