

Enterprise Automation

From Development to Production

Laura Romero Carrillo
Solution Architect

Pat Harrison
Solution Architect

Our customers have adopted automation broadly

Customers have millions of nodes running automation

with Red Hat Ansible Automation Platform.

Each node in turn controls a series of IT resources, applications, or other assets.

Content Creator Tools

-  Execution environment
-  Ansible content tools
-  Ansible Content Collections

What is Automation Controller?

a UI and RESTful API allowing you to scale IT automation, manage complex deployments and speed productivity

- Role-based access control
- Deploy entire applications with push-button deployment access
- All automations are centrally logged
- Powerful workflows match your IT processes

Collections

Simplified and consistent content delivery

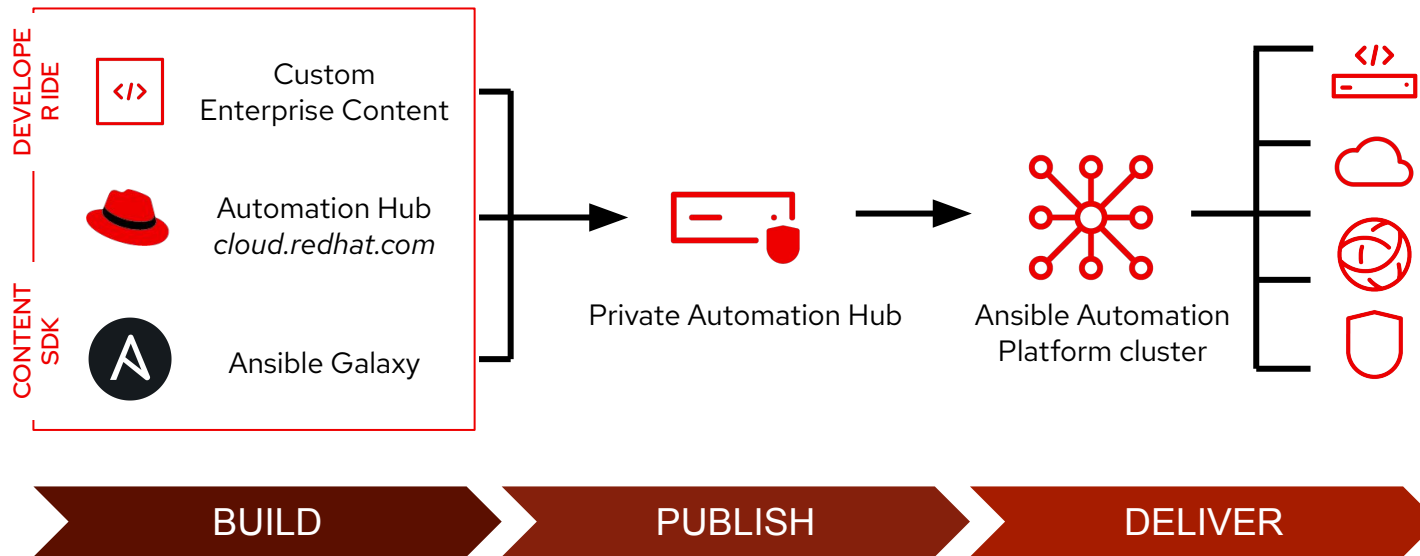

What are they?

Collections are a data structure containing automation content:

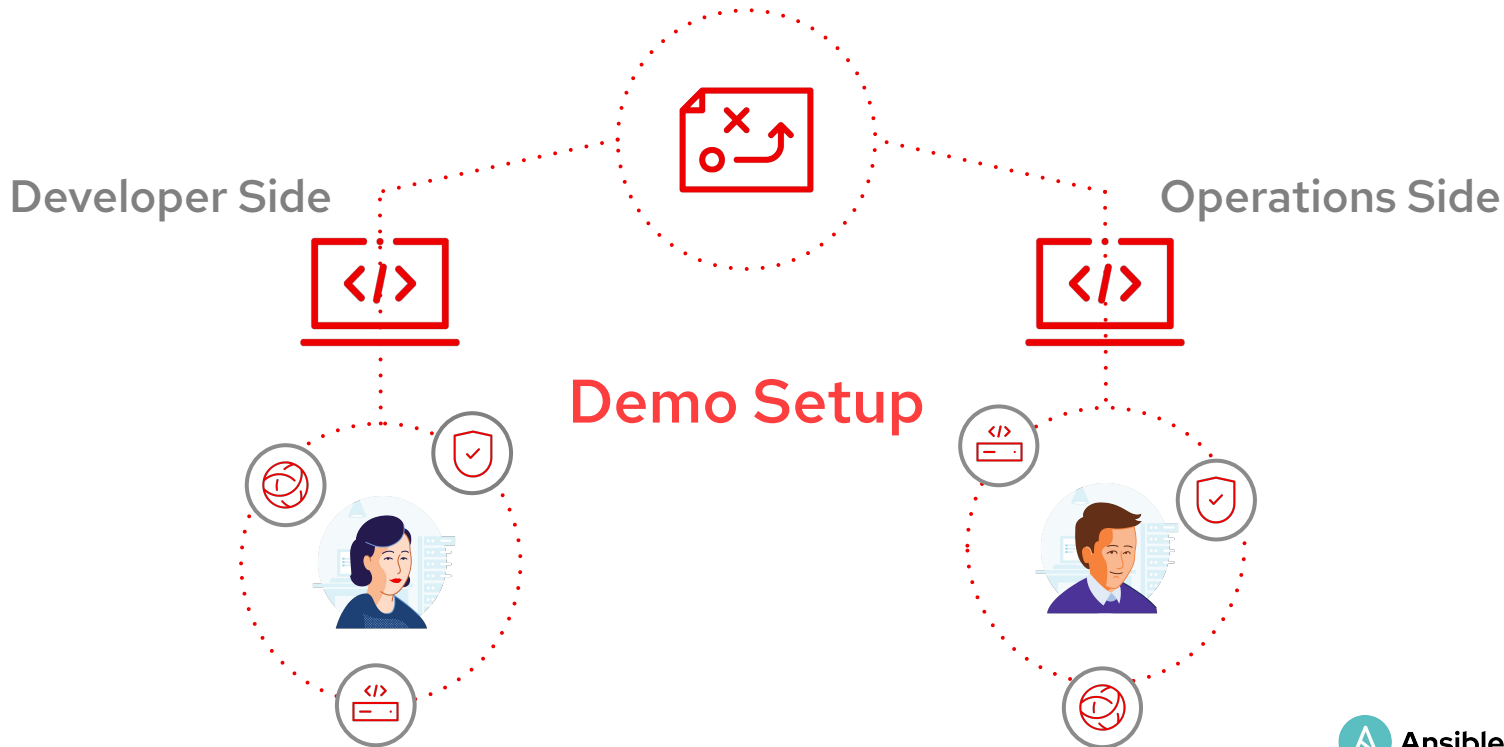

- ▶ Modules
- ▶ Playbooks
- ▶ Roles
- ▶ Plugins
- ▶ Docs
- ▶ Tests

Automation Hub

We will demonstrate our new use cases in a live demo

To execute Ansible, we need...

Collections

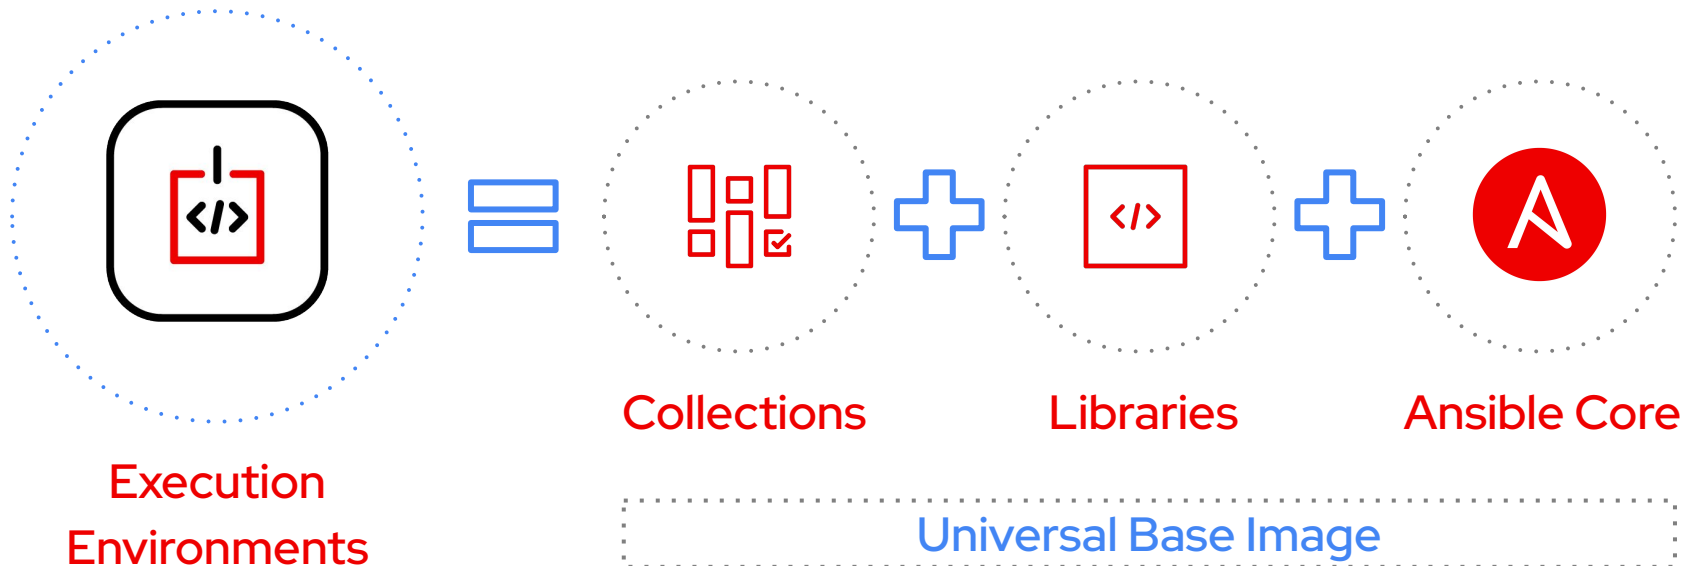

Libraries

Ansible Core

Automation Execution Environments

Components needed for automation, packaged in a cloud-native way

New platform components

Ansible Builder

Command line tool leveraging podman that builds Ansible environments inside a container.

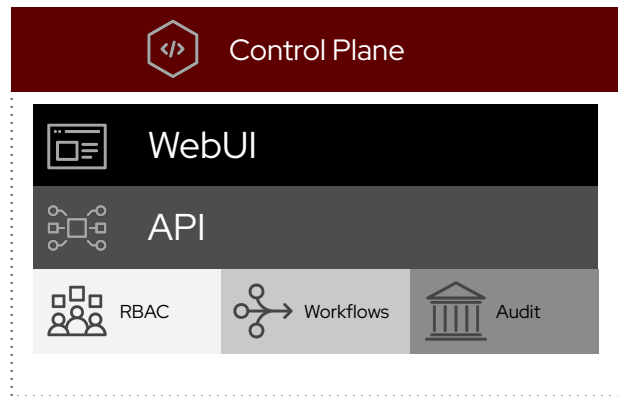

Ansible Navigator

Command line tool for Execution Environments. Provides enhanced and familiar experience for Ansible creators.

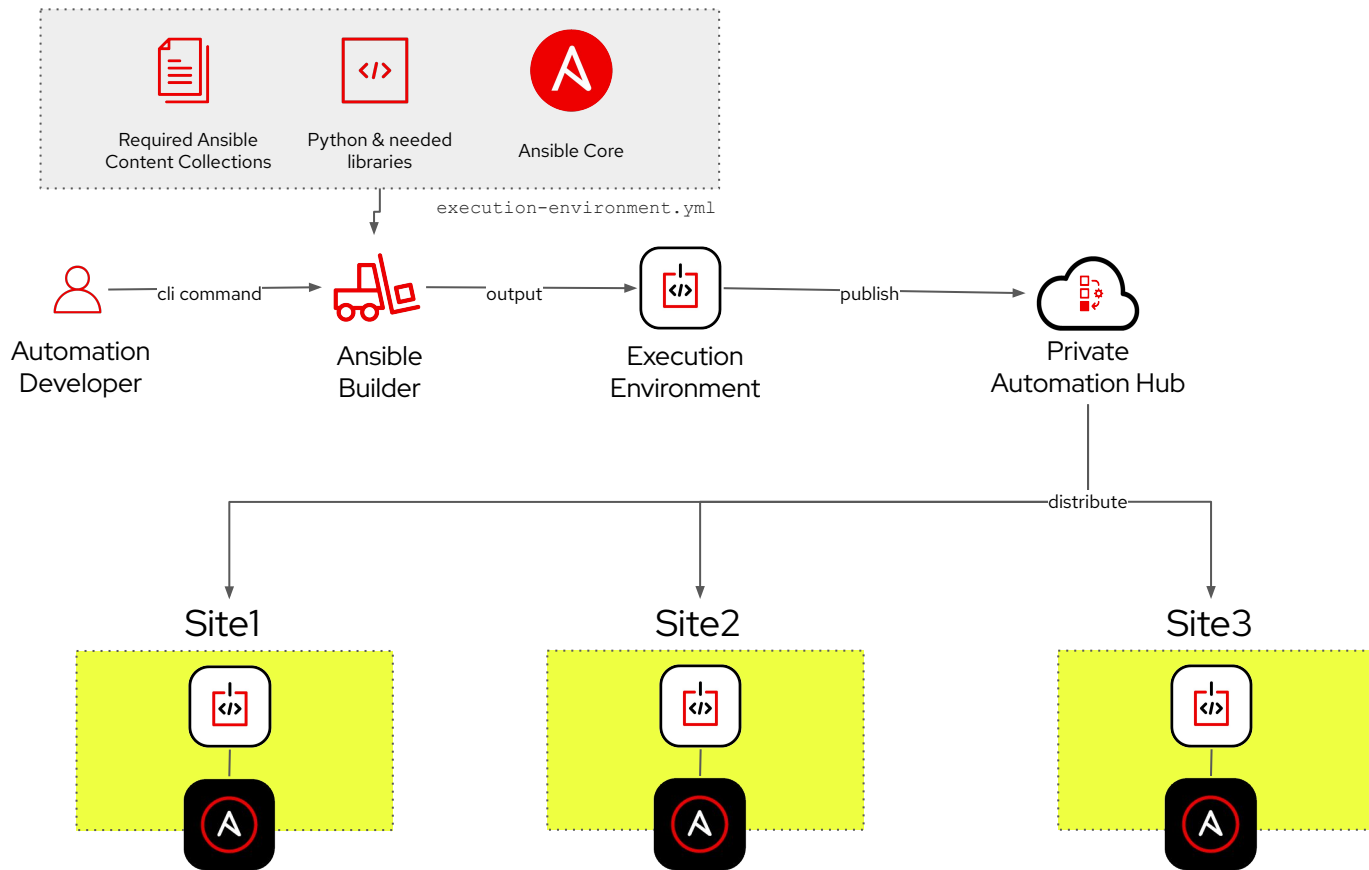

Automation Controller Architecture

- Decentralized, modular application
- Decouple control plane and execution plane
- Containerized execution environments

Execution Environment Workflow

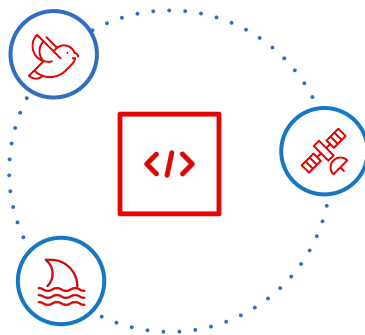

Many technologies, different life cycles

How to keep runtime environment, collections and dependencies aligned?
