Your interactive guide for

Automating the Joiner, Mover, Leaver process with Okta

okta

Introduction

As organisations continue to settle into long-term hybrid working models that take them outside of the traditional network perimeter, securely enabling their workforce to have access to the right applications at the right time has become a top priority for IT leaders.

Previously, IT teams would manually onboard & offboard users, leaving employees waiting to gain access to the apps and servers they need to work. But in today's fast moving digital climate, where location, device, and network are all in a constant state of flux, securely provisioning access rights for every user as they move through different stages of the Joiner, Mover, Leaver lifecycle poses many complex challenges.

As well as draining precious time and resources, increasing IT friction, and escalating cost, manually provisioning access rights can significantly increase the risk of security breaches through human error during a period when cybercrime is at an all-time high. To help ease these IT pains and build the long-term, future-proof hybrid workforce strategies that drive success in the digital era, many IT leaders are now turning to automated Identity Access Management for a solution.

Whether it's a large enterprise or a new company that's growing at pace, this fully interactive guide will help demonstrate how effective Okta is at helping IT leaders quickly overcome every JML challenge, enabling them to give their employees the freedom to work wherever works best.

So we can provide you with the right information, tell us:

Which part of the Joiner, Mover Leaver process do you find most challenging?
