The future of data in a digital world

IDC research has found that 70% of businesses will modernise their server, storage, and data protection infrastructure over the coming two years.

IT infrastructure is already permeating every facet of a business, regardless of its size, industry sector, or geographic location. With many companies looking to balance on-premises and cloud workloads, the high data availability cannot be ignored. And while not every workload must be highly available, aspects like redundancy, performance, and accessibility cannot be ignored. It is now the ideal time for businesses to modernise their IT infrastructure to position them strongly for a successful digital transformation.

The NetApp ONTAP-based enterprise storage solutions, exclusively available through Westcon-Comstor, provide any company with the high availability, storage, and security requirements essential for the future world of work.

Embrace the future with NetApp

Your trusted partner for a flexible, robust, and scalable IT infrastructure.
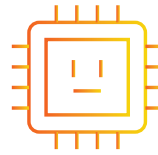

NetApp ONTAP Data Management Software

To build a better hybrid cloud experience that solves IT challenges like data security, staffing, and future growth, you need a solid foundation. Loaded with industry-leading innovations, NetApp ONTAP data management software gives you every advantage possible everywhere your data lives.

NetApp ONTAP Data Management Software

Smart: Simplify operations and reduce cost's

Streamline IT with one storage environment for your on-premises and cloud resources.

Automate day-to-day tasks and save time for your IT staff.

Powerful: Respond to changing Business requirements

Accelerate critical workloads with industry-leading performance.

Scale capacity and performance without disruption.

Trusted: Protect from ransomware attacks and secure your data across your hybrid cloud

Guard against data loss and accelerate recovery with integrated data protection.

Eliminate business disruptions due to failures, maintenance, and site disasters.

With NetApp ONTAP Data Management Software,

you can create a storage infrastructure that reduces risk, saves time, and optimises your budget. Build a foundation for your hybrid multi-cloud that simplifies how you manage your data spread across your business.

NetApp AFF A-Series Systems

Need a little (or a lot) more performance for your business-critical applications?

The NetApp AFF A-Series arrays deliver the award-winning speed and responsiveness your performance-sapping workloads demand.

NetApp
Distributor Partner | **Comstor**

Accelerate Applications

Speed up your critical applications with lightning-fast end-to-end NVMe enterprise all-flash arrays.

Run artificial intelligence and machine learning applications with the lowest latency.

Reduce data centre costs

Minimise your data centre footprint by storing up to 2PB of data in a 4U compact system.

Save SSD storage by 5 to 10 times with inline data reduction technologies.

Simplify IT operations

Unify data services across SAN and NAS environments, both on the premises and in the cloud.

Set up and configure a complete system and serve data within 10 minutes.

IT departments need smart, powerful, trusted solutions that take advantage of modern cloud technologies. The NetApp AFF A-Series Systems are designed to help companies transform their infrastructure more quickly and fuel data-driven strategies. Powered by NetApp ONTAP data management software, AFF systems deliver industry-leading performance, superior flexibility, best-in-class data services and cloud integration to help you accelerate, manage, and protect your business-critical data in the hybrid cloud.

NetApp ASA All-Flash SAN Array

The days of choosing between performance and efficiency are in the past. NetApp ASA systems deliver simple, dedicated block storage with superior performance, high availability, and leading efficiency with no trade-offs required.

Why you should install it:

Superior performance for your dedicated SAN environment.
Continuous data access to support your business-critical workloads.
Simple and efficient data management that reduces TCO.
Effortless cloud connectivity with leading integration to Amazon Web Services, Microsoft Azure, and Google Cloud.

NetApp ASA provides a dedicated and simple SAN experience for a company's IT staff. The new System Manager interface creates an intuitive user experience, and the feature-rich, SAN-specific ONTAP data management capabilities are built in.
