

Six Vital Elements to Better Quality Control in Construction

Time, cost and quality are integral to successful construction. But in the UK and Ireland, improvement is needed with [a third of projects annually failing to be delivered on time or on budget.](#) This infographic looks at the biggest quality control pain points and how you can avoid them.

Better Quality Control > Checklist

01 ✓

Implement a Quality Process

Quality control can be kept on track with a digital process that acts as one single source of truth and updates in real-time, ensuring nothing is overlooked and rework is avoided.

£ Rework can cost up to [5% of a project's contract value.](#)

02 ✓

Create an Inspection Plan

Inspection plans can falter when they fail to consider when they'll happen or who will carry them out. It is imperative to communicate these responsibilities and ensure every related detail remains visible.

03 ✓

Inspection Checklists

Checklists should never be siloed, and sharing in advance can be a powerful aid in achieving compliance. Accessibility for all is vital in an increasingly remote world and supports in-house procurement efforts.

04 ✓

Defects Resolution Process

A digital resolution process with phone integration allows on-site teams to take photos, add notes and communicate them to the rest of the team. This means repairs are carried out as soon as possible and the risk of defects being overlooked is reduced.

05 ✓

Quality Reporting

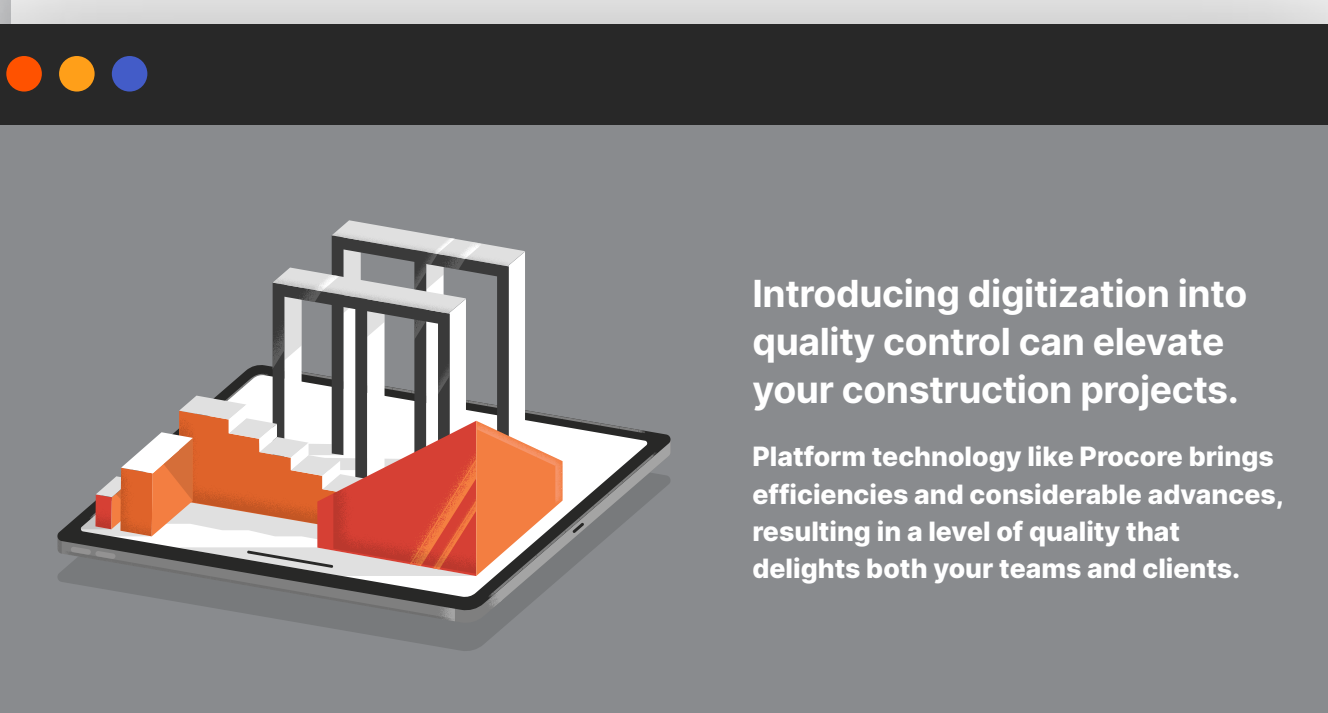

Reporting continues to suffer from data silos. A centralised online hub means greater access, visibility and up-to-date information. From there, it can be aggregated into dashboard views and used to drive action.

06 ✓

Continuous Quality Improvement

Housing project information allows teams to review track records and better identify where efficiencies can be made leading to continuous improvements.

Introducing digitization into quality control can elevate your construction projects.

Platform technology like Procore brings efficiencies and considerable advances, resulting in a level of quality that delights both your teams and clients.
